

Maximizing the Power of the Cloud

Keste's Managed Services program for Salesforce is one of the best ways to maximize the Cloud's value proposition by providing ongoing support that can be used to support a more flexible operating model.

With Keste you will get a different type of managed services program, one that will provide a bank of hours — at competitive rates — to be used at any time with no minimum hourly requirements.

Keste's consultants are local, and we will provide you with a single point of contact who will work hand-in-hand with both business owners and IT support staff to ensure that company objectives are met.

HOW IT WORKS:

- Purchase a bank of hours from Keste to support or enhance your salesforce.com instance
- If enhancements are required, an estimate of work is provided for approval
- Billing will occur only for work that is actually performed
- No hourly minimum is required per month

BENEFITS:

- Readily available consulting organization at your fingertips
- Locally-based consultants at competitive rates
- Single point of contact, improving speed, communication and customer service

Your Salesforce implementation must evolve via ongoing customizations and configurations in order to adapt to ever-changing business requirements.

You need an ongoing support and maintenance solution that can support that evolution.

Keste's Managed Services Program for Salesforce is one of the best ways to maximize the Cloud's value proposition by providing ongoing support that can be used to support a more flexible operating model.

Keste is an award-winning software solutions and development company that helps companies automate, integrate and optimize complex business processes. As a Platinum-level member of Oracle Partner Network and the 2014 Oracle Specialized Partner of the Year — Global in Middleware, Keste has the proven track record to design and implement enterprise mobility solutions that allow our customers to extend their existing investments to mobile devices for anytime, anywhere access.
