ORACLE DATABASE HEALTHCHECK
Breathing new life into your database

keste

Are Your Oracle Databases Optimized?

It can be a challenge to quantify how well your database is meeting operational expectations and identify areas to improve performance. This is where the certified Oracle database specialists at Keste can assist.

Keste can identify current performance problems and provide a roadmap to prevent them from occurring in the future — turning your DB from a cost center into a profit center.

Database HealthCheck Overview

Our Database HealthCheck is a comprehensive offering based on decades of experience tuning and optimizing Oracle databases for many different types of enterprises.

It is a fast and easy way to ensure that your Oracle database is properly optimized.

Our HealthCheck focuses on:

- Machine configuration — analyze the utilization of CPU, memory and disks.
- DB configuration — review parameter settings to maximize performance.
- DB layout — review of optimal performance and recoverability.
- Internal DB statistics — review database resource utilization.
- DB and machine logs — review for sporadic and recurring errors.
- DB jobs — review logs for completion status and issues.
- DB performance report — prepare performance report for one business critical hour.

Keste — Protecting Your Company's Investment

At the conclusion of the HealthCheck, we will provide a recommendations document designed to achieve actionable results.

This document will include any needed enhancements (or changes) for your Oracle database to ensure it meets/exceeds operational requirements, performance goals, and user expectations. Keste will also provide insight into tools and methods available to continuously monitor your environment, allowing it to perform at optimum levels.

In all, Keste's DB specialists will certify that your database meets Oracle's standards for best practices.

So protect your organization's investment. Contact Keste today at solutions@keste.com or +1 877.537.8360 for information on a free 2 hour DB review to assess HealthCheck readiness.

Benefits of an Optimized Oracle Database:

- Improved response times
- Avoid costly hardware upgrades
- Peace of mind - especially prior to a major go-live update
- Provide capacity for growth

Database Evaluation Includes:

- CPU Utilization
- Memory Utilization
- File System Space Utilization
- File System I/O Utilization
- Object Space Utilization
- Paging Frequency
- Backups

Keste is an award-winning software solutions and development company that helps companies automate, integrate and optimize complex business processes.
